

# Contents

<b>Preface</b>	<b>xi</b>
<b>1 Math review</b>	<b>1</b>
1.1 Some sets . . . . .	1
1.2 Pairs of reals . . . . .	3
1.3 Exponentials and logs . . . . .	4
1.4 Some handy functions . . . . .	5
1.5 Summations . . . . .	6
1.6 Strings . . . . .	8
1.7 Variation in notation . . . . .	9
<b>2 Logic</b>	<b>10</b>
2.1 A bit about style . . . . .	10
2.2 Propositions . . . . .	11
2.3 Complex propositions . . . . .	11
2.4 Implication . . . . .	12
2.5 Converse, contrapositive, biconditional . . . . .	14
2.6 Complex statements . . . . .	15
2.7 Logical Equivalence . . . . .	16

2.8 Some useful logical equivalences . . . . .	18
2.9 Negating propositions . . . . .	18
2.10 Predicates and Variables . . . . .	19
2.11 Other quantifiers . . . . .	20
2.12 Notation . . . . .	22
2.13 Useful notation . . . . .	22
2.14 Notation for 2D points . . . . .	23
2.15 Negating statements with quantifiers . . . . .	24
2.16 Binding and scope . . . . .	25
2.17 Variations in Notation . . . . .	26
<b>3 Proofs</b>	<b>27</b>
3.1 Proving a universal statement . . . . .	27
3.2 Another example of direct proof involving odd and even . . . . .	29
3.3 Direct proof outline . . . . .	30
3.4 Proving existential statements . . . . .	31
3.5 Disproving a universal statement . . . . .	31
3.6 Disproving an existential statement . . . . .	32
3.7 Recap of proof methods . . . . .	33
3.8 Direct proof: example with two variables . . . . .	33
3.9 Another example with two variables . . . . .	34
3.10 Proof by cases . . . . .	35
3.11 Rephrasing claims . . . . .	36
3.12 Proof by contrapositive . . . . .	37
3.13 Another example of proof by contrapositive . . . . .	38

<b>4 Number Theory</b>	<b>39</b>
4.1 Factors and multiples . . . . .	39
4.2 Direct proof with divisibility . . . . .	40
4.3 Stay in the Set . . . . .	41
4.4 Prime numbers . . . . .	42
4.5 GCD and LCM . . . . .	42
4.6 The division algorithm . . . . .	43
4.7 Euclidean algorithm . . . . .	44
4.8 Pseudocode . . . . .	46
4.9 A recursive version of gcd . . . . .	46
4.10 Congruence mod k . . . . .	47
4.11 Proofs with congruence mod $k$ . . . . .	48
4.12 Equivalence classes . . . . .	48
4.13 Wider perspective on equivalence . . . . .	50
4.14 Variation in Terminology . . . . .	51
<b>5 Sets</b>	<b>52</b>
5.1 Sets . . . . .	52
5.2 Things to be careful about . . . . .	53
5.3 Cardinality, inclusion . . . . .	54
5.4 Vacuous truth . . . . .	55
5.5 Set operations . . . . .	56
5.6 Set identities . . . . .	58
5.7 Size of set union . . . . .	58
5.8 Product rule . . . . .	59
5.9 Combining these basic rules . . . . .	60

5.10 Proving facts about set inclusion . . . . .	61
5.11 An abstract example . . . . .	63
5.12 An example with products . . . . .	64
5.13 A proof using sets and contrapositive . . . . .	65
5.14 Variation in notation . . . . .	66
<b>6 Relations</b>	<b>67</b>
6.1 Relations . . . . .	67
6.2 Properties of relations: reflexive . . . . .	69
6.3 Symmetric and antisymmetric . . . . .	70
6.4 Transitive . . . . .	71
6.5 Types of relations . . . . .	73
6.6 Proving that a relation is an equivalence relation . . . . .	74
6.7 Proving antisymmetry . . . . .	75
<b>7 Functions and onto</b>	<b>77</b>
7.1 Functions . . . . .	77
7.2 When are functions equal? . . . . .	79
7.3 What isn't a function? . . . . .	80
7.4 Images and Onto . . . . .	81
7.5 Why are some functions not onto? . . . . .	82
7.6 Negating onto . . . . .	82
7.7 Nested quantifiers . . . . .	83
7.8 Proving that a function is onto . . . . .	85
7.9 A 2D example . . . . .	86
7.10 Composing two functions . . . . .	87

7.11 A proof involving composition . . . . .	88
7.12 Variation in terminology . . . . .	88
<b>8 Functions and one-to-one</b>	<b>90</b>
8.1 One-to-one . . . . .	90
8.2 bijections . . . . .	92
8.3 Pigeonhole Principle . . . . .	92
8.4 Permutations . . . . .	93
8.5 Further applications of permutations . . . . .	94
8.6 Proving that a function is one-to-one . . . . .	95
8.7 Composition and one-to-one . . . . .	96
8.8 Strictly increasing functions are one-to-one . . . . .	97
8.9 Making this proof more succinct . . . . .	98
8.10 Variation in terminology . . . . .	99
<b>9 Graphs</b>	<b>100</b>
9.1 Graphs . . . . .	100
9.2 Degrees . . . . .	102
9.3 Complete graphs . . . . .	103
9.4 Cycle graphs and wheels . . . . .	103
9.5 Isomorphism . . . . .	104
9.6 Subgraphs . . . . .	106
9.7 Walks, paths, and cycles . . . . .	107
9.8 Connectivity . . . . .	108
9.9 Distances . . . . .	109
9.10 Euler circuits . . . . .	110

9.11 Bipartite graphs . . . . .	111
9.12 Variation in terminology . . . . .	113
<b>10 2-way Bounding</b>	<b>114</b>
10.1 Marker Making . . . . .	115
10.2 Pigeonhole point placement . . . . .	116
10.3 Graph coloring . . . . .	117
10.4 Why care about graph coloring? . . . . .	119
10.5 Proving set equality . . . . .	120
10.6 Variation in terminology . . . . .	121
<b>11 Induction</b>	<b>122</b>
11.1 Introduction to induction . . . . .	122
11.2 An Example . . . . .	123
11.3 Why is this legit? . . . . .	124
11.4 Building an inductive proof . . . . .	125
11.5 Another example . . . . .	126
11.6 Some comments about style . . . . .	127
11.7 A geometrical example . . . . .	128
11.8 Graph coloring . . . . .	129
11.9 Postage example . . . . .	131
11.10 Nim . . . . .	133
11.11 Prime factorization . . . . .	134
11.12 Variation in notation . . . . .	135
<b>12 Recursive Definition</b>	<b>137</b>
12.1 Recursive definitions . . . . .	137

12.2 Finding closed forms . . . . .	138
12.3 Divide and conquer . . . . .	140
12.4 Hypercubes . . . . .	142
12.5 Proofs with recursive definitions . . . . .	143
12.6 Inductive definition and strong induction . . . . .	144
12.7 Variation in notation . . . . .	145
<b>13 Trees</b>	<b>146</b>
13.1 Why trees? . . . . .	146
13.2 Defining trees . . . . .	149
13.3 m-ary trees . . . . .	150
13.4 Height vs number of nodes . . . . .	151
13.5 Context-free grammars . . . . .	151
13.6 Recursion trees . . . . .	157
13.7 Another recursion tree example . . . . .	159
13.8 Tree induction . . . . .	160
13.9 Heap example . . . . .	161
13.10 Proof using grammar trees . . . . .	163
13.11 Variation in terminology . . . . .	164
<b>14 Big-O</b>	<b>166</b>
14.1 Running times of programs . . . . .	166
14.2 Asymptotic relationships . . . . .	167
14.3 Ordering primitive functions . . . . .	169
14.4 The dominant term method . . . . .	170
14.5 Big-O . . . . .	171

14.6 Applying the definition of big-O . . . . .	172
14.7 Proving a primitive function relationship . . . . .	173
14.8 Variation in notation . . . . .	174
<b>15 Algorithms</b>	<b>176</b>
15.1 Introduction . . . . .	176
15.2 Basic data structures . . . . .	176
15.3 Nested loops . . . . .	178
15.4 Merging two lists . . . . .	179
15.5 A reachability algorithm . . . . .	180
15.6 Binary search . . . . .	181
15.7 Mergesort . . . . .	183
15.8 Tower of Hanoi . . . . .	184
15.9 Multiplying big integers . . . . .	186
<b>16 NP</b>	<b>189</b>
16.1 Finding parse trees . . . . .	189
16.2 What is NP? . . . . .	190
16.3 Circuit SAT . . . . .	192
16.4 What is NP complete? . . . . .	194
16.5 Variation in notation . . . . .	195
<b>17 Proof by Contradiction</b>	<b>196</b>
17.1 The method . . . . .	196
17.2 $\sqrt{2}$ is irrational . . . . .	197
17.3 There are infinitely many prime numbers . . . . .	198
17.4 Lossless compression . . . . .	199

17.5 Philosophy . . . . .	200
<b>18 Collections of Sets</b>	<b>201</b>
18.1 Sets containing sets . . . . .	201
18.2 Powersets and set-valued functions . . . . .	203
18.3 Partitions . . . . .	204
18.4 Combinations . . . . .	206
18.5 Applying the combinations formula . . . . .	207
18.6 Combinations with repetition . . . . .	208
18.7 Identities for binomial coefficients . . . . .	209
18.8 Binomial Theorem . . . . .	210
18.9 Variation in notation . . . . .	211
<b>19 State Diagrams</b>	<b>212</b>
19.1 Introduction . . . . .	212
19.2 Wolf-goat-cabbage puzzle . . . . .	214
19.3 Phone lattices . . . . .	215
19.4 Representing functions . . . . .	217
19.5 Transition functions . . . . .	217
19.6 Shared states . . . . .	218
19.7 Counting states . . . . .	221
19.8 Variation in notation . . . . .	222
<b>20 Countability</b>	<b>223</b>
20.1 The rationals and the reals . . . . .	223
20.2 Completeness . . . . .	224
20.3 Cardinality . . . . .	224

20.4 Cantor Schroeder Bernstein Theorem . . . . .	225
20.5 More countably infinite sets . . . . .	226
20.6 $\mathbb{P}(\mathbb{N})$ isn't countable . . . . .	227
20.7 More uncountability results . . . . .	228
20.8 Uncomputability . . . . .	229
20.9 Variation in notation . . . . .	231
<b>21 Planar Graphs</b>	<b>232</b>
21.1 Planar graphs . . . . .	232
21.2 Faces . . . . .	233
21.3 Trees . . . . .	234
21.4 Proof of Euler's formula . . . . .	235
21.5 Some corollaries of Euler's formula . . . . .	236
21.6 $K_{3,3}$ is not planar . . . . .	237
21.7 Kuratowski's Theorem . . . . .	238
21.8 Coloring planar graphs . . . . .	241
21.9 Application: Platonic solids . . . . .	242
<b>A Jargon</b>	<b>245</b>
A.1 Strange technical terms . . . . .	245
A.2 Odd uses of normal words . . . . .	246
A.3 Constructions . . . . .	248
A.4 Unexpectedly normal . . . . .	249
<b>B Acknowledgements and Supplementary Readings</b>	<b>251</b>
<b>C Where did it go?</b>	<b>255</b>
